## DIGITAL STILL CAMERA

### The CF Card—Changing the World of Digital Cameras

The Card Shot NV-DCF1 stores your pictures on reusable memory cards instead of conventional film, so you can take as many pictures as you want without having to worry about replacement of film!

Now, you can also transfer your pictures right into your computer.

Using the new CF Card taking beautiful pictures has never been easier and fun.

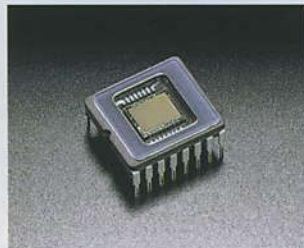

#### Interchangeable CF Memory

When one card is full, download pictures onto your computer and reuse or slip in a new card, and take as many pictures as you want.

#### Progressive 350K Square Pixel CCD

DCF1's high-resolution CCD gives you amazing clarity even when you transfer your pictures to computer.

#### 1.8" Colour LCD Monitor with 40 Degree Tilt

You can easily view your pictures right after you take them with the built-in 1.8" adjustable Colour LCD monitor.

#### 3 Different Power Supplies

Alkaline batteries, rechargeable batteries, or AC adaptor—a readily accessible power supply wherever you go.

### DCF1 Makes Reading Photo Data Into Your Computer Fast and Easy!

#### Direct Loading Using a PCMCIA Adaptor

If your desktop or laptop computer is equipped with a PCMCIA slot, photo data can be loaded directly using a PCMCIA adaptor. Since the adaptor plugs right into your computer, there is no need to wait for the data to transfer through a cable—it's direct!

PCMCIA Adaptor (Supplied)

CF Card

Driver Software Included

RS-232C

#### From the DCF1 with Only One Cable!

Even for computers without a PCMCIA slot, transferring data is as simple as connecting one cable between the DCF1 and your computer.
