

$$\textcircled{1} \quad R_1 = x + z$$

$$\textcircled{2} \quad R_2 = y + z$$

$$\textcircled{3} \quad R_3 = x + \frac{yz}{y+z}$$

$$1-2: \quad R_1 - R_2 = x + z - (y + z)$$

$$\Rightarrow R_1 - R_2 = x - y$$

$$\Rightarrow x = R_1 - R_2 + y$$

Son  $G_{IR}$ :

$$R_3 = R_1 - R_2 + y + \frac{yz}{R_2} \quad | z = R_2 - y$$

$$R_3 = R_1 - R_2 + y + \frac{y(R_2 - y)}{R_2}$$

$$R_3 = R_1 - R_2 + y + \frac{yR_2 - y^2}{R_2} \quad | \cdot R_2$$

$$R_2 R_3 = R_2 R_1 - R_2^2 + \gamma R_2 + \gamma R_2 - \gamma^2$$

$$\gamma^2 = R_2 R_3 - R_2 R_1 + R_2^2 - 2 \cdot \gamma R_2$$

$$\gamma^2 = R_2 (R_3 - R_1 + R_2 - \underline{2x}) \quad ?$$
